EDUCATION

National University of Singapore Expected Year of Graduation: 2026

- Bachelor of Engineering (Hons): Mechanical Engineering
- Double minor in Quantitative Finance and Data Analytics

Stanford University International Honors Program (Stanford, USA) 06/2023 – 08/2023

- Technology Entrepreneurship (A)
- Solving Social Problems with Data (A)

SKILLS

Design Thinking | Machine Learning | Process Improvement | Sustainability Consulting (ESG) | Mechanical System Mechanical Design | Engineering Material | Manufacturing Processes | Prototyping | Assembly | Fluid Mechanics
Software: SolidWorks, Fusion 360, SQL, R, Python, Arduino, MATLAB, Microsoft Office & Google Suite, Figma

ENGINEERING PROJECTS

Autonomous Steering Robot 01/2023 – 05/2023

- Wired a responsive closed-loop control system with **Arduino**, integrating LDRs and LEDs as 'eyes', optimizing real-time path adjustment and ensuring precise navigation at various bends.
- Remodelled chassis by streamlining dimensions of the universal plate and fine-tuning parameters of gearbox, allowing support 5x of its body weight whilst finishing with a top 15% time.
- Optimized positioning of its eyes and wheels to catapult 90-degree turns success from 50% to 85%.

Autonomous Multi-terrain with in-built Catapult Robot 01/2023 – 05/2023

- Assembled robust and lightweight **mechanical chassis** within the 30x30x30 cm design constraint with **CAD**, achieving top 10% of lowest weight class amongst 100+ robots.
- Conducted Speed-to-weight analysis by standardizing positions of Arduino and curating wheel's design, optimizing vehicle's centre of gravity to ensure smooth traversing across bumpy terrain.
- Refined algorithm parameters, reducing jerking incidents when operating servo meter by 40%.

COMPETITIONS AND AWARDS

Tech for Social Good Champion 06/2023 – 09/2023

- Port 63 by NTU (40 teams; 10k Cash Prize + 10k Green Lane Grant)
- Engineered (with Figma) a proximity-based matching app (NavigEyes) that allows Visually Impaired Individuals to be matched with human aids in multi-tenanted locations like malls.
- Developed and implemented user research methodologies and frameworks, securing partnerships (100% success rate) with malls across Indonesia and Singapore to execute pilot projects.
- Pitched NavigEyes' value proposition to judges from SG Enable, A*Star, NTU and raiSe Singapore.

N-Novate x SDG Open Hack 2023 05/2023 – 05/2023

- **Most socially impactful solution** (14 teams; NUS-wide hackathon; 10k Green Lane Grant)
- Developed WeaveAbility, a marketplace that empowers Persons with Disabilities (PWD) to sell self-designed reworked clothes, allowing for unique competition advantage on top of hard + soft skills.
- Conducted extensive market research in the marketplace vertical, determining WeaveAbility's final value proposition, financial viability, and business (revenue model)
- Pitched WeaveAbility's value proposition to judges from Social Impact Catalyst, Impact Investors and Häring & Co. AG.

ADDITIONAL INFORMATION

Awards and Certificates:

- SPS Psychathon 2023 Gold Award (First place at Singapore-wide 2-month long Hackathon)
- NUS HealthHack 2024 (Top 5 Finalists amongst 110 submissions – Singapore-wide)
- Introduction to Product Management (PM1101E – NUS Product Club – Jason Teo (Head of PM at Trust)
- Fundamentals of Venture Capital

Language: English and Bahasa Indonesia (Native), Chinese Mandarin (Conversational Proficiency)
Hobbies: Exploring hidden food gems | Hiking | Soccer + basketball (Captain) | National school rep. (Table Tennis)
