GIRVIN DJAPARDI

bit.ly/Girvin-Website • (+65) 83754302 • girvin_djapardi@u.nus.edu • www.linkedin.com/in/girvin-djapardi

EDUCATION

National University of Singapore **Aug 2022 - Present**

- Bachelor of Engineering (Hons): Mechanical Engineering | Minor in Finance & Data Analytics | Energy & Sustainability

Stanford University (Stanford, USA) **Jun 2023 - Aug 2025**

- NUS Overseas Colleges (Attached to Stanford Management Science and Engineering)
- International Honors Program: Solving Social Problems with Data (A) | Technology Entrepreneurship (A)

WORK EXPERIENCE

Sales, Data and Operations at Padlet (San Francisco Office) **August 2024- Present**

- Designed and built multiple internal tools ands automations with Airtable and Zapier for key functions across the customer journey lifecycle (lead conversion, onboarding & renewals), saving 2+ hours per day for 7+ team members.
- Built real-time tracking dashboards on MetaBase with SQL, driving strategic insights that directly influence marketing efforts, revenue strategies, and customer journey success.
- Conducted comprehensive market research to propel effective outbound campaigns (Go-To-Market strategies) and ignite key partnerships with potential resellers and untapped markets across the world.

Energy and Sustainability Consultant at Savills Singapore **May 2024 – July 2024**

- Led the decarbonization roadmap for 6 sites of diverse use-cases across Singapore, curating extensive sustainability reports where utility bill savings of up to 20% are identified, designed, and proposed via HVAC and lighting retrofit.
- Created intuitive dashboards for Building Management System data, where outliers are rectified to maintain the upkeep of engineering systems, and data extrapolation is streamlined, reducing the department's data analysis lifecycle by 18%.
- Engaged in client-facing opportunities to assess building health and conduct energy audits, consulting on Green Building certifications such as Green Mark, WELLS and LEED.

Mechanical & Electrical Carbon Calculator (MECC) Intern at Energy Studies Institute **Oct 2023 – March 2024**

- Integrated LLMs and Excel to systemize data processing on embodied & operational carbon (A1-B7) from sustainability reports and Environmental Product Declarations on M&E equipment, accelerating database progression by 30%.
- Analyzed and extrapolated correlations using statistical modeling with Python, building visualization dashboards, and bolstering precision of global warming potential estimation (emissions calculation) by 20%.
- Initiated and led the development of an analytical framework that incorporates maintenance as a variable, incorporating factors such as oil leakages and frequency of oil substitution in transformers, expanding the calculator's use case.

Product Manager at HedgeDrip (B2C SaaS Fintech Startup) **Aug 2023 - Dec 2023**

- Collaborated across cross-functional teams in the design and execution of product strategy, bolstering customer retention by aligning product offerings with consumer pricing sensitivities.
- Spearheaded product-market fit validation, analyzed and implemented consumer trends within the FinTech vertical, increasing early adopter retention rate by 15%.
- Identified pain points in the landing page's user interface, thus designing and conducting A/B experiments (with Figma), increasing conversion rate by 35% upon final design launch.

PROJECTS

Managing Director of Product and Strategy at StudentsCatalyst SEA **Mar 2023 - Dec 2023**

- Led two departments (3 managers & 11 associates) to spearhead SEA's first region-wide student incubator, connecting under privileged students across the region to industry-leading mentors, culminating in a business case competition.
- Strategized region-specific proposals and outreach, leveraging thorough market research and identifying firm-specific pain points, securing 3 case partners: A FinTech startup, a university-based consulting firm, and an F&B MNC.
- Impacted over 500+ students across the region and funneled 0-30 media partnerships to our ecosystem (SEA & beyond)

Startup Investment Analyst at NUS Alumni Ventures (NAV) **Sep 2023 - Present**

- Executed thorough due diligence for startups in the MedTech and TravelTech vertical, enhancing the precision of investment decisions through meticulous financial analysis, market trend research, and robust interpretation of data.
- Initiated deal flow as a rep. of NAV by proactively connecting with founders in startup events, delivering monthly investment pitches to align with the angel fund's objectives and risk appetite whilst influencing fund allocation.

Algorithmic Mitigation of Affective Polarization (Machine Learning | Policy Analysis) **Jun 2023 - Aug 2023**

- Devised an innovative optimization model utilizing real-time data and binary decision variables to minimize exposure to emotionally charged social media content.
- Deployed Python to conduct data cleaning and data analysis on complex data sets from Pew Research Centre, Kaggle etc., creating intuitive visualizations to communicate the project's impact.
- Executed extensive literature research, proposing, and evaluating Information-to-Action implementations via Public Policy and Private Firm routes to fuel top-down and bottom-up change.

SKILLS

Design Thinking | Machine Learning | Process Improvement | Sustainability Consulting (ESG) | Data Science | Financial Analysis Due Diligence | Market Research | Strategy | GHG Protocol | Decarbonization | Client Management | Business Intelligence | BD

Software: SolidWorks, Fusion 360, SQL, R, Python, Arduino, MATLAB, Microsoft Office & Google Suite, Figma, Tableau

ADDITIONAL INFORMATION

Languages: English and Bahasa Indonesia (Full Professional), Chinese Mandarin (Conversational Proficiency)

Hobbies and Interests: Exploring hidden food gems | Hiking | Soccer + basketball (Captain); National school rep. (Table Tennis)

14th August 2024

To Whom it May Concern

Dear Sir/Madam,

I have had the pleasure of supervising Girvin as our Energy and Sustainability Management Intern at Savills Singapore. Over the past 10 weeks, I had the opportunity to witness his growth and the impact he has produced for us, from end-to-end retrofit design to energy audit works and green mark certifications for the built environment. As such, I am writing this letter to strongly recommend Girvin.

From the outset, Girvin showcased a strong understanding of energy engineering and sustainability principles. During his time with us, he led and assisted in diverse projects, including write-ups of Energy and Sustainability reports for multiple sites across Singapore, with each possessing unique cooling systems and building use-case. In his reports, with building owners as its audience, Girvin demonstrated an innate ability to balance technical information, business incentive and readability. His technical acumen is reflected by his ability discern cost-effective methods to increase the building's energy efficiency, thereby imploring energy savings.

One of Girvin's standout contributions was developing dashboards for BMS data across various sites. His ability to calculate chiller plant efficiency, analyze data outliers, and create intuitive visualizations has been instrumental in streamlining our data analysis processes for Green Mark applications. By implementing a new excel formula for data extrapolation, Girvin significantly enhanced our ability to analyze peak and off-peak hours, improving data integrity and reducing the time required for analysis.

Beyond technical expertise, Girvin consistently exhibited strong soft skills that greatly contributed to the quality of work and impact he has produced. His adaptability and ability to quickly learn new concepts allowed him to seamlessly integrate into our team and take on complex tasks. As a superb team player, Girvin collaborated effectively with colleagues, offering support and sharing insights that helped streamline our processes.

Girvin's communication skills, both written and verbal, are excellent. He was able to convey complex technical information in a clear and concise manner, making it accessible to both technical and non-technical stakeholders. This skill was particularly valuable in client-facing situations, where Girvin demonstrated a high level of professionalism and confidence

Throughout his tenure with us, Girvin has consistently demonstrated exceptional problem-solving skills, adaptability, and a thirst for knowledge and improvement. I am confident that Girvin will continue to thrive and make a significant value-add in any venture he embarks on. We wish him all the best in his future endeavors and will be more than happy to be contacted at +6581618779 or samuel.han@savills.com.sg for further information should the need arise.

Yours sincerely,

Saml

Samuel Han
Director, Energy & Sustainability Management
Savills (Singapore) Pte Ltd

ENERGY STUDIES INSTITUTE

To Whom it May Concern,

I have had the pleasure of supervising Girvin as a research Intern at Energy Studies Institute. Over the past few months, I had the opportunity to witness his growth and the impact he has produced for us. As such, I am writing this letter to recommend Girvin.

Girvin's ability to gain an adept understanding of the sustainability vertical is impressive. He was proactive in grasping concepts on Life Cycle Assessments and Environmental Product Declarations, amongst others. His utilization of data processing software, alongside integrating LLMs for effective data filtering reflects his aptitude in process improvement. His ability to dissect and effectively examine Environmental Product Declarations (hence analyze and systemize environmental data) has been pivotal in effectively establish the database of our carbon calculator.

In addition to his curiosity, Girvin has demonstrated a strong aptitude for research. On top of processing data, his ability to understand the nuances of different Mechanical and Electrical equipment allowed him to locate a repository of Product Category-Specific Requirements (PCR), and this better supported the project database establishment. Additionally, leading the data processing for switchboards and switchgear, his output on emission calculations established the correlations between mass and power rating to global warming potential. Girvin has consistently showcased his capacity to be a forward problem-solver, making him adept for the ever-changing startup landscape.

Lastly, Girvin's desire to explore beyond his comfort zone is commendable. Carbon accounting is a field Girvin has no exposure to, yet his commitment towards excellence and to be a sponge for knowledge has supported the team greatly. I believe Girvin's capacity will prove to be a valuable asset for any company.

Throughout his tenure with us, Girvin has consistently demonstrated exceptional problem-solving skills, adaptability, and a thirst for knowledge and improvement. I am confident that Girvin will continue to thrive and make a significant value-add in any venture he embarks on. We wish him all the best in his future endeavors and feel free to contact me at esiaewl@nus.edu.sg for further information should the need arise.

Yours sincerely,

Alvin Ee Wei Liang
Research Fellow
Program Lead – Energy Consumption, Carbon Accounting & The Circular Economy
